

Solution Guide

Reference answers and the Good, Better, Best ladder

This is your model-answer companion. For every pain point you will find the fitting Cisco solution, how a strong Solution Engineer explains it, the outcome it delivers, and what **Good**, **Better** and **Best** sound like, so you can recognise and coach each level.

The customer. Cedarline Health Group is a regional healthcare payer-provider with roughly 8,000 employees across four hospitals and thirty-one clinics, plus a claims-processing business that handles the money. Growth by acquisition (including a second data centre absorbed as-is) and a mid-flight, disorderly move to public cloud have left a fragmented security posture. After a security incident in March, the board asked what would have stopped it, and leadership still cannot answer. Budget and executive attention are approved but explicitly temporary, and the security team is small.

Good, Better, Best: a growth ladder, not a grade

We evaluate qualitatively. There are no points. Each answer sits on a ladder, and your job is to recognise where it lands and nudge it upward. Every level is a win worth naming.

Good

NAMES THE FIT

You put the right Cisco solution on the table and show that you understand what the customer is actually worried about.

Better

EXPLAINS THE HOW

You connect that solution to the concern, showing how it works and why it answers this specific problem, in language the customer would nod along to.

Best

SELLS THE OUTCOME

You tie it to Cedarline's real constraints and the business outcome they care about, and you place it inside the bigger Hybrid Mesh Firewall story.

Coach toward the outcome. When an answer names the right product but stops there, affirm the fit, then ask for the one sentence about Cedarline's constraints and the business result that would move it up the ladder.

AI Security

The conversation. Cedarline is standing up AI across regulated workflows and public cloud faster than security can see it. Help them prove compliance, vet what they adopt, and get visibility and guardrails over AI traffic.

PAIN POINT 1

Under the EU AI Act, we are classified as a 'Provider' for our internal AI systems. We need to demonstrate robustness and cybersecurity compliance to satisfy Article 15. How does Cisco help us meet these specific requirements?

Fitting solution	AI Defense · AI Model and Application Validation
How a strong SE explains it	Cisco AI Defense is specifically designed to support Provider obligations under the EU AI Act. We utilize algorithmic red teaming technology for AI Model & App Validation, which identifies safety and security vulnerabilities at scale. By documenting these validation results and maintaining continuous runtime protection, you create a defensible, auditable framework.
The outcome it delivers	It automates the technical evidence gathering required for "Conformity Assessments." By mapping AI-specific threats to standardized frameworks (like MITRE ATLAS and OWASP), it provides the documentation and continuous monitoring necessary to prove to regulators that your systems are robust and compliant.

 Good NAMES THE FIT	Names AI Defense and clearly understands the concern. The right tool is on the table.
 Better EXPLAINS HOW	Explains how it addresses the concern. Cisco AI Defense is specifically designed to support Provider obligations under the EU AI Act. We utilize algorithmic red teaming technology for AI Model & App Validation, which identifies safety and security vulnerabilities at scale.
 Best SELLS OUTCOME	Ties it to Cedarline's constraints and the outcome it delivers. It automates the technical evidence gathering required for "Conformity Assessments." By mapping AI-specific threats to standardized frameworks (like MITRE ATLAS and OWASP), it provides the documentation and continuous monitoring necessary to prove to regulators that your systems are robust and compliant. It also positions the solution within the wider Hybrid Mesh Firewall design.

We are integrating various open-source models and third-party agents into our internal workflows. How can we ensure these assets aren't introducing vulnerabilities into our environment before they even go live?

Fitting solution**AI Defense** · Supply Chain Risk Management**How a strong SE explains it**

Cisco AI Defense addresses this through proactive Supply Chain Risk Management. We scan your model files, repositories, and MCP servers to identify malicious or unsafe assets. By integrating this into your CI/CD pipeline, we can block compromised AI assets before they are deployed, ensuring that your operational environment remains secure from the start.

The outcome it delivers

It enables "Shift-Left" security by creating an inventory of all AI models and agents. By identifying vulnerabilities before production, it prevents the introduction of malicious code or poisoned data into your ecosystem.

 **Good**
NAMES THE
FIT

Names AI Defense and clearly understands the concern. The right tool is on the table.

 **Better**
EXPLAINS
HOW

Explains how it addresses the concern. Cisco AI Defense addresses this through proactive Supply Chain Risk Management. We scan your model files, repositories, and MCP servers to identify malicious or unsafe assets.

 **Best**
SELLS
OUTCOME

Ties it to Cedarline's constraints and the outcome it delivers. It enables "Shift-Left" security by creating an inventory of all AI models and agents. By identifying vulnerabilities before production, it prevents the introduction of malicious code or poisoned data into your ecosystem. It also positions the solution within the wider Hybrid Mesh Firewall design.

We know AI is showing up across our cloud environments faster than security can track it. We're worried we have models, agents, datasets, and MCP-connected tools running without visibility or consistent controls.

Fitting solution	Cisco AI Defense, AI Cloud Visibility · Ai Cloud Visibility
How a strong SE explains it	That's exactly the visibility gap Cisco AI Defense is built to solve. With AI Cloud Visibility, Cisco AI Defense continuously discovers AI assets across distributed cloud environments, including models, agents, datasets, MCP servers, and agent-to-tool workflows. Instead of relying on teams to manually identify what exists, you get a centralized view of your AI attack surface so you can find unsanctioned assets, assess whether they are protected, and bring them under policy.
The outcome it delivers	identifies rogue or unsanctioned AI assets Maps relationships across data, models, agents, and tools Gives security teams a single-pane-of-glass view of AI exposure Helps close gaps before unknown AI usage becomes a production risk

 Good NAMES THE FIT	Names Cisco AI Defense, AI Cloud Visibility and clearly understands the concern. The right tool is on the table.
 Better EXPLAINS HOW	Explains how it addresses the concern. That's exactly the visibility gap Cisco AI Defense is built to solve. With AI Cloud Visibility, Cisco AI Defense continuously discovers AI assets across distributed cloud environments, including models, agents, datasets, MCP servers, and agent-to-tool workflows.
 Best SELLS OUTCOME	Ties it to Cedarline's constraints and the outcome it delivers. identifies rogue or unsanctioned AI assets Maps relationships across data, models, agents, and tools Gives security teams a single-pane-of-glass view of AI exposure Helps close gaps before unknown AI usage becomes a production risk. It also positions the solution within the wider Hybrid Mesh Firewall design.

We're running AI workloads in cloud accounts, but we don't have a reliable way to see which models and AI assets are actually in use. We're also concerned about workloads reaching out to third-party AI models without security knowing about it. And even when we do know the traffic path, we need a practical way to inspect and enforce guardrails on prompt and response traffic in the cloud without changing every application.

Fitting solution

AI Defense = AI visibility and guardrail integration
Multicloud Defense = cloud account connection, traffic visibility, policy attachment, and egress enforcement · AI Runtime Protection

How a strong SE explains it

That's exactly what the AI Defense-Multicloud Defense integration is designed to address. Cisco AI Defense uses the integration to discover AI assets in your cloud environments and identify external AI destinations your workloads are calling. Then Cisco Multicloud Defense provides the cloud account connectivity, traffic visibility, and egress gateway enforcement point where AI Guardrails Profiles can be applied. In practice, that means you get AI asset visibility plus runtime inspection of prompt and response traffic at the cloud egress layer. AI Defense gives you the AI-specific visibility and guardrail logic, while Multicloud Defense gives you the cloud-network integration and enforcement point.

The outcome it delivers

Finds AI assets in cloud accounts
 Identifies third-party AI model usage
 Uses existing cloud-network control points for enforcement
 Avoids relying only on application-level changes

Good

NAMES THE
FIT

Names AI Defense and clearly understands the concern. The right tool is on the table.

Better

EXPLAINS
HOW

Explains how it addresses the concern. That's exactly what the AI Defense-Multicloud Defense integration is designed to address. Cisco AI Defense uses the integration to discover AI assets in your cloud environments and identify external AI destinations your workloads are calling.

Best

SELLS
OUTCOME

Ties it to Cedarline's constraints and the outcome it delivers. Finds AI assets in cloud accounts
 Identifies third-party AI model usage
 Uses existing cloud-network control points for enforcement
 Avoids relying only on application-level changes. It also positions the solution within the wider Hybrid Mesh Firewall design.

Cloud Edge

The conversation. Workloads sprawl across AWS, Azure and on-prem, each with its own policy model. Contain lateral movement, prove consistent controls to auditors, and give Cedarline one place to define and enforce policy.

PAIN POINT 1

If a breach occurs in one of our public cloud instances, we are terrified that the attacker will move laterally into our core on-premises systems. How can we contain these threats in a multicloud environment?

Fitting solution	Multicloud Defense · Multicloud Defense Gateways
How a strong SE explains it	Multicloud Defense leverages macro and micro-segmentation capabilities to enforce strict communication boundaries. By integrating with our Hybrid Mesh Firewall and Hypershield, we can isolate workloads and inspect traffic between cloud segments, effectively stopping lateral movement before it reaches your sensitive data.
The outcome it delivers	It provides granular visibility and control over east-west traffic. By applying Zero Trust principles across the hybrid fabric, you transform your network into a series of secure, isolated zones that prevent an attacker from pivoting through your infrastructure.

 Good NAMES THE FIT	Names Multicloud Defense and clearly understands the concern. The right tool is on the table.
 Better EXPLAINS HOW	Explains how it addresses the concern. Multicloud Defense leverages macro and micro-segmentation capabilities to enforce strict communication boundaries. By integrating with our Hybrid Mesh Firewall and Hypershield, we can isolate workloads and inspect traffic between cloud segments, effectively stopping lateral movement before it reaches your sensitive data.
 Best SELLS OUTCOME	Ties it to Cedarline's constraints and the outcome it delivers. It provides granular visibility and control over east-west traffic. By applying Zero Trust principles across the hybrid fabric, you transform your network into a series of secure, isolated zones that prevent an attacker from pivoting through your infrastructure. It also positions the solution within the wider Hybrid Mesh Firewall design.

Our auditors require proof that our security controls are applied consistently across all our cloud workloads. Gathering this data from different cloud providers is a manual, time-consuming nightmare.

Fitting solution	Multicloud Defense · Multicloud Defense Visibility
How a strong SE explains it	Cisco Multicloud Defense provides unified logging and traceability. Because our security framework is integrated across the network fabric, you can generate consolidated reports that map directly to your compliance requirements (such as NIS2 or DORA) across all cloud environments from a single dashboard.
The outcome it delivers	It automates the collection of evidence for security audits. By consolidating logs and policy enforcement data, you create a "single source of truth" that simplifies compliance reporting and demonstrates proactive governance to regulators.

 Good NAMES THE FIT	Names Multicloud Defense and clearly understands the concern. The right tool is on the table.
 Better EXPLAINS HOW	Explains how it addresses the concern. Cisco Multicloud Defense provides unified logging and traceability. Because our security framework is integrated across the network fabric, you can generate consolidated reports that map directly to your compliance requirements (such as NIS2 or DORA) across all cloud environments from a single dashboard.
 Best SELLS OUTCOME	Ties it to Cedarline's constraints and the outcome it delivers. It automates the collection of evidence for security audits. By consolidating logs and policy enforcement data, you create a "single source of truth" that simplifies compliance reporting and demonstrates proactive governance to regulators. It also positions the solution within the wider Hybrid Mesh Firewall design.

We have workloads spread across AWS, Azure, and on-premises data centers. Managing security policies individually in each cloud environment is creating massive operational overhead and leading to inconsistent security posture.

Fitting solution	Multicloud Defense · Unified Security across public clouds
How a strong SE explains it	Cisco Multicloud Defense, integrated within our Hybrid Mesh Firewall architecture, provides a unified control plane. You can define security policies once via Security Cloud Control and enforce them consistently across your entire distributed environment, regardless of the underlying cloud provider.
The outcome it delivers	It replaces siloed, manual configuration with centralized orchestration. By abstracting the security policy from the cloud-native tools, it ensures that your security posture is uniform and eliminates the "configuration drift" that occurs when managing multiple cloud consoles.

 Good NAMES THE FIT	Names Multicloud Defense and clearly understands the concern. The right tool is on the table.
 Better EXPLAINS HOW	Explains how it addresses the concern. Cisco Multicloud Defense, integrated within our Hybrid Mesh Firewall architecture, provides a unified control plane. You can define security policies once via Security Cloud Control and enforce them consistently across your entire distributed environment, regardless of the underlying cloud provider.
 Best SELLS OUTCOME	Ties it to Cedarline's constraints and the outcome it delivers. It replaces siloed, manual configuration with centralized orchestration. By abstracting the security policy from the cloud-native tools, it ensures that your security posture is uniform and eliminates the "configuration drift" that occurs when managing multiple cloud consoles. It also positions the solution within the wider Hybrid Mesh Firewall design.

We have workloads on-prem, in cloud, and in mixed environments, and policy consistency is becoming difficult. Every environment feels different, and we're worried about drift.

Fitting solution	Cisco Secure Workload Cisco Secure Firewall Cisco Secure Firewall Management Center (FMC) Cisco Security Cloud Control Secure Workload Integration with Secure Firewall Management Center
How a strong SE explains it	That's a common hybrid environment challenge. Cisco Secure Workload helps create a more unified segmentation model by using application dependency awareness and AI/ML-driven policy discovery to define policy based on how workloads actually communicate. Cisco Secure Firewall then enforces broader segmentation boundaries at the network layer.
The outcome it delivers	Reduces policy drift across hybrid and multicloud environments Aligns policy to application behavior, not just static IP-based rules Supports consistent macro and micro controls together

 Good NAMES THE FIT	Names Cisco Secure Workload Cisco Secure Firewall and clearly understands the concern. The right tool is on the table.
 Better EXPLAINS HOW	Explains how it addresses the concern. That's a common hybrid environment challenge. Cisco Secure Workload helps create a more unified segmentation model by using application dependency awareness and AI/ML-driven policy discovery to define policy based on how workloads actually communicate.
 Best SELLS OUTCOME	Ties it to Cedarline's constraints and the outcome it delivers. Reduces policy drift across hybrid and multicloud environments Aligns policy to application behavior, not just static IP-based rules Supports consistent macro and micro controls together. It also positions the solution within the wider Hybrid Mesh Firewall design.

DC Edge · Perimeter Firewall

The conversation. A mixed-vendor perimeter, an inherited rulebase and mostly encrypted traffic leave blind spots and a slow response. Restore visibility, speed the response, and modernise detection with the team they have.

PAIN POINT 1

When our security tools detect a compromised device, our manual response time is too slow. By the time we identify the user and manually isolate the port, the attacker has already moved through the network.

Fitting solution

ISE · Security Group Tags (pxGrid integration)

How a strong SE explains it

Cisco ISE integrates with your security ecosystem via pxGrid and Adaptive Network Control (ANC). When a threat is detected, ISE can automatically trigger a quarantine policy, isolating the compromised device in real-time without requiring manual intervention.

The outcome it delivers

It automates the "Response" phase of the incident lifecycle. By bridging the gap between detection and enforcement, it stops threats at the speed of the network.

 **Good**
NAMES THE
FIT

Names ISE and clearly understands the concern. The right tool is on the table.

 **Better**

Explains how it addresses the concern. Cisco ISE integrates with your security ecosystem via pxGrid and Adaptive Network Control (ANC). When a threat is detected, ISE can automatically trigger a quarantine policy, isolating the compromised device in real-time without requiring manual intervention.

 **Best**
SELLS
OUTCOME

Ties it to Cedarline's constraints and the outcome it delivers. It automates the "Response" phase of the incident lifecycle. By bridging the gap between detection and enforcement, it stops threats at the speed of the network. It also positions the solution within the wider Hybrid Mesh Firewall design.

PAIN POINT 2

Our firewall environment has become too complex to manage manually.

Fitting solution	Cisco Security Cloud Control, FMC, FTD · Unified Policy Administration
How a strong SE explains it	Cisco applies AI-driven analysis to firewall telemetry and policy data to surface optimization opportunities, reduce manual troubleshooting, and guide cleaner policy administration.
The outcome it delivers	Reduces manual policy review; identifies redundant/stale rules; lowers risk from human error.

 Good NAMES THE FIT	Names Cisco Security Cloud Control and clearly understands the concern. The right tool is on the table.
 Better EXPLAINS HOW	Explains how it addresses the concern. Cisco applies AI-driven analysis to firewall telemetry and policy data to surface optimization opportunities, reduce manual troubleshooting, and guide cleaner policy administration.
 Best SELLS OUTCOME	Ties it to Cedarline's constraints and the outcome it delivers. Reduces manual policy review; identifies redundant/stale rules; lowers risk from human error. It also positions the solution within the wider Hybrid Mesh Firewall design.

PAIN POINT 3

Most of our traffic is encrypted, so we've lost visibility into a huge part of our environment.

Fitting solution	Cisco Secure Firewall (FTD), FMC, Security Cloud Control · EVE
How a strong SE explains it	Encrypted Visibility Engine (EVE) uses AI/ML-based fingerprinting to analyze encrypted traffic patterns and identify suspicious behavior without decrypting the payload.
The outcome it delivers	Restores visibility into encrypted blind spots; avoids the performance/privacy overhead of decrypt-everything strategies.

 Good NAMES THE FIT	Names Cisco Secure Firewall (FTD) and clearly understands the concern. The right tool is on the table.
 Better EXPLAINS HOW	Explains how it addresses the concern. Encrypted Visibility Engine (EVE) uses AI/ML-based fingerprinting to analyze encrypted traffic patterns and identify suspicious behavior without decrypting the payload.
 Best SELLS OUTCOME	Ties it to Cedarline's constraints and the outcome it delivers. Restores visibility into encrypted blind spots; avoids the performance/privacy overhead of decrypt-everything strategies. It also positions the solution within the wider Hybrid Mesh Firewall design.

We're worried traditional signature-based detection won't catch new or unknown attacks quickly enough.

Fitting solution	Cisco Secure Firewall (FTD), FMC, Security Cloud Control · Snort ML
How a strong SE explains it	That's exactly where Snort ML helps. It adds machine-learning-based detection inside the Snort 3 engine to identify exploit behavior associated with unknown/zero-day threats.
The outcome it delivers	Addresses the gap between known and unknown threat detection; reduces dependence on signature timing.

 Good NAMES THE FIT	Names Cisco Secure Firewall (FTD) and clearly understands the concern. The right tool is on the table.
 Better EXPLAINS HOW	Explains how it addresses the concern. That's exactly where Snort ML helps. It adds machine-learning-based detection inside the Snort 3 engine to identify exploit behavior associated with unknown/zero-day threats.
 Best SELLS OUTCOME	Ties it to Cedarline's constraints and the outcome it delivers. Addresses the gap between known and unknown threat detection; reduces dependence on signature timing. It also positions the solution within the wider Hybrid Mesh Firewall design.

Macro & Micro Segmentation

The conversation. A flat data centre and fragmented Kubernetes networking invite east-west movement. Build segmentation Cedarline can adopt safely, with runtime visibility and application-dependency awareness so nothing breaks.

PAIN POINT 1

Network policy helps, but we also need to know what's happening at runtime inside the workload. We need better detection of suspicious behavior and policy violations.

Fitting solution

Isovalent · Tetragon Runtime Security

How a strong SE explains it

That's where Tetragon comes in. Tetragon extends the value of Cilium by providing eBPF-based runtime security and threat detection. It monitors system-level activity and network behavior in real time, so you can detect suspicious actions, investigate runtime events, and enforce security policy closer to the workload. In other words, Cilium helps control connectivity and segmentation, while Tetragon helps you understand and secure runtime behavior.

The outcome it delivers

Adds runtime visibility beyond basic network controls
Detects suspicious system and network behavior in real time
Strengthens Kubernetes security with deeper workload-level insight

 **Good**
NAMES THE
FIT

It also positions the solution within the wider Hybrid Mesh Firewall design.

Our Kubernetes networking feels fragmented across clusters and environments. We're dealing with too many moving parts, inconsistent policies, and too much operational complexity.

Fitting solution

Not specified · Cilium Networking Policies

How a strong SE explains it

That's exactly where Isovalent Cilium helps. Cilium provides a modern, eBPF-based Kubernetes networking layer that gives you consistent connectivity, policy enforcement, and visibility across clusters and environments. Instead of relying on older, IP-centric approaches that struggle in dynamic Kubernetes environments, Cilium enables more scalable and identity-aware networking designed for cloud-native workloads.

The outcome it delivers

Replaces brittle, IP-centric networking models with a Kubernetes-native approach
Improves consistency across dynamic cluster environments
Reduces operational complexity with a more unified networking and policy layer

 **Good**

Ties it to Cedarline's constraints and the outcome it delivers. Replaces brittle, IP-centric networking models with a Kubernetes-native approach Improves consistency across dynamic cluster environments Reduces operational complexity with a more unified networking and policy layer. It also positions the solution within the wider Hybrid Mesh Firewall design.

Right now we're stitching together separate tools for networking, security, and observability in Kubernetes, and it's creating too much overhead.

Fitting solution	cilium and tetragon
How a strong SE explains it	That's exactly the consolidation opportunity Isovalent addresses. With Cilium for networking and policy, and Tetragon for runtime security, you get a more unified platform for connectivity, segmentation, observability, and security. This helps reduce tool sprawl and gives platform and security teams a more integrated operating model.
The outcome it delivers	Consolidates multiple functions into one platform approach Reduces tool sprawl and operational friction Improves context sharing between networking, security, and operations teams

 Good NAMES THE FIT	Names cilium and tetragon and clearly understands the concern. The right tool is on the table.
 Better EXPLAINS HOW	Explains how it addresses the concern. That's exactly the consolidation opportunity Isovalent addresses. With Cilium for networking and policy, and Tetragon for runtime security, you get a more unified platform for connectivity, segmentation, observability, and security.
 Best SELLS OUTCOME	Ties it to Cedarline's constraints and the outcome it delivers. Consolidates multiple functions into one platform approach Reduces tool sprawl and operational friction Improves context sharing between networking, security, and operations teams. It also positions the solution within the wider Hybrid Mesh Firewall design.

We know we need microsegmentation, but we don't have enough visibility into east-west flows or application dependencies to create policy safely. We don't want to break the application.

Fitting solution	Cisco Secure Workload Cisco Secure Firewall · Application dependency mapping
How a strong SE explains it	That's one of the biggest reasons customers adopt Cisco Secure Workload. It gives you deep visibility into workload communication and application dependency mapping, so you can see how applications actually behave before enforcing policy. That visibility helps you build segmentation policy with much more confidence, reduce guesswork, and move toward microsegmentation in a controlled way.
The outcome it delivers	Reveals actual application communication paths Reduces the risk of segmentation causing outages Enables more precise policy design and staged enforcement

 Good NAMES THE FIT	Names Cisco Secure Workload Cisco Secure Firewall and clearly understands the concern. The right tool is on the table.
 Better EXPLAINS HOW	Explains how it addresses the concern. That's one of the biggest reasons customers adopt Cisco Secure Workload. It gives you deep visibility into workload communication and application dependency mapping, so you can see how applications actually behave before enforcing policy.
